

MAXIMISE SILO EFFICIENCY WITH EXPERT CLEANING FROM TSEBO

Specialised cleaning solutions for silos storing grain, maize, cement, chemicals, and more.

THE CHALLENGE

Maintaining clean silos and bulk storage facilities is essential for ensuring optimal operational performance. Over time, residues and moisture can lead to blockages, product contamination, and even production delays. Without regular maintenance, silos may face reduced efficiency, costly downtime, and potential safety hazards.

OUR SOLUTIONS

Tsebo's Specialised Cleaning Services offer both dry and wet cleaning methods, tailored to the needs of your silos:

- **Dry Clean:** Using brushes, poles, cloths, scrapers, and vacuums with anti-static hoses for a thorough clean without moisture.
- **Wet Clean:** Pressure cleaning with hot or cold water to remove stubborn build-up or contamination.

BENEFITS

- ✓ **Increased Efficiency:** Regular cleaning ensures silos function at their full capacity, preventing blockages and maintaining smooth material flow.
- ✓ **Extended Silo Lifespan:** Routine cleaning helps prevent material build-up, corrosion, and rust, prolonging the life of your silos.
- ✓ **Product Integrity:** Avoid contamination or waste by ensuring your stored products remain safe and uncontaminated.
- ✓ **Improved Production Flow:** Maintain a consistent production schedule by preventing debris and clogging, which could lead to downtime.
- ✓ **Safety Compliance:** Our services are fully compliant with Health and Safety standards, safeguarding your workforce and products.

Why is regular cleaning important?

Silos used for human foodstuffs or animal feed require cleaning at least once a year, but ideally every six months. Condensation caused by temperature and humidity can lead to mould growth, blockages, and corrosion, all of which can reduce the silo's efficiency and pose health risks.

Health and safety

Tsebo adheres to all Health and Safety regulations, ensuring a safe and compliant cleaning process every time.
